The Rego Performance Monitoring Base Kit

Pinpoint performance deficiencies with Performance Monitoring portlets.

The base kits in regoFoundation's PPMExpress are built on core best practices we've refined for over a decade. Our PPM engagements span 400+ customers and include thousands of development requests. Rego Base Kits are the fastest, most cost-effective way to implement the widest array of Project and Portfolio Management solutions. Implementing these items collectively has saved organizations thousands of dollars.

Every CA PPM instance has a couple of pages and portlets that don't run as fast as we would like, and long load times can lead to usage problems. The Rego Performance Monitoring Base Kit is loaded with 7 portlets to identify performance gaps. Beginning with an in-depth look at usage across the application—based on the actual user experience—our team will show you where to get started.

What's Included:

Rego-Developed Portlets

Log Analysis Summary:

This portlet summarizes daily session activity with average sessions, average actions, peak sessions (cluster), and peak sessions (node). See system activity by functionality and distinct sessions by hour and day of the week.

Average Action Time by Hour:

This portlet, which is also useful for determining database and application health, displays a comparison of functionality by hour, so you can identify issues reducing the average action time across the day.

Functionality by Hour:

See counts of core functionality usage by hour for the filtered timeframe, whether Project Management, Timesheets, Resource Management, Portfolio, Financials, or Ideas.

Long Running Pages:

Two portlets display the average response time, max time, and number of executions in your environment by page. Click on the page name to drill down to the detail, which is useful for determining whether the average is due to constant slow pages or one long session. Detail shows each page access, time, user, and session ID.

Page Filter:

This portlet contains a page level filter that allows administrators and the PMO to apply date ranges to all portlets on the page simultaneously.

User Action Trace:

Select any user and/or session ID and see every action that was taken. Shows date, time, and if the action was POST or GET.

Rego Strategy

- Performance portlets provide real value only when they're on a production load environment.
- Rego guides can supply training and result analysis via web share and provide guidance viewing the detailed results of performance portlet outputs to help determine what items need further action and which ones can be ignored.

Rego's Performance Monitoring Base Kit will help you pinpoint deficiencies before they become issues.

Pricing Information

The Rego Performance Monitoring Base Kit is priced as a one-time cost. The portlets come with a block of hours to cover installation and set-up into two environments via a Studio Content Pack, as well as validation on test and assistance with initial analysis production.

# of CA PPM Users	Performance Monitoring Base Kit
0-99	\$1,000
100-499	\$2,000
500-2,999	\$2,000
3,000 and Up	\$2,000
