Application Portfolio Management

Make Smart, Simple Decisions

Increase ROI, Decrease Risk with APM for CA PPM

Rego has developed APM add-ons to CA PPM to give you deep insight into application portfolio performance, business capabilities, health, risks, and the total cost of service associated with software applications.

You need to have the right information, at the right time, for the right people.

The **CIO** needs a holistic view of the current application space, including the IT roadmap to manage financial investments.

The **Application Development Manager** needs to manage the application lifecycle without draining resources.

The **IT Director** wants a single, accurate view of applications driving benefits versus those leaching dollars.

The **Enterprise Architect** wants to maintain business capability standards and quickly identify redundant applications.

Application Portfolio Management

Rego's APM add-on allows you to **reduce complexity** and **simplify management**, so you can use accurate information for application rationalization.

Decisions just got easier.

Rego **APM**

At its heart, Application Portfolio Management is a discipline that can help your organization better deliver needed business capabilities while keeping costs and risks to the business as low as possible.

When APM is done well, the benefits can be enormous.

Gain Enhanced Visibility
Management can centrally track application health and risk, staffing needs, how expenditures are tracking against budgets, capabilities supplied, and more.

Improve Business Alignment
Organizations can align applications with business goals and objectives, support capabilities that identify overlaps and gaps, and streamline the portfolio of applications.

Strengthen Application Governance
Tracks the lifecycle of all company applications within CA PPM—from purchase and maintenance through upgrades and retirement.

Tailored Application Governance
Analysis and governance workflows tailored to different levels and types of analysis, as well as review/accept/approve workflows, notifications, and action items.

Reduce Cost
Leadership teams can track and forecast the total cost of service delivery by helping them identify their suite of applications, analyze business capabilities, determine usage and efficiency, eliminate redundant applications, schedule support and maintenance (including assign resources), monitor lower-cost alternatives, and reduce comprehensive servicing costs.

Do you need APM?
Ask yourself these questions.

Do you know what all your applications are?

Do you have the metrics on maintenance costs, upgrade requirements, and resource scheduling for all company applications?

Do any of your applications have overlapping functions?

Have you developed and scrutinized internal products and applications?

Do you want to use a tool you already have to manage this process?

Have you acquired other companies and their existing applications?

Do you want a cross-functional approach to eliminate overlapping vendors, applications, and capabilities across all business units?

Do you have an application onboarding process that looks at existing capabilities prior to making a purchase decision?

Seem overwhelming? Don't worry, we can help.
