Let Rego Be Your Guide

Anxious about Your Clarity SaaS Migration to the Google Cloud?

Let Rego Be Your Guide

Reduce Risk with Rego's Best Practice Planning and Execution

We Want to Help You Transition Successfully

Pre-Migration Planning Services

Assessment Service

Understand the Impacts

Broadcom will remediate SQL and NSQL statements, integrations, and reports. As part of your migration, your instance will be upgraded to the latest version of Clarity, and you will need to plan on appropriate training. Your team will need to validate and provide updates for new release and upgrade features and ensure the entire solution is working as expected.

• Identify All Potentially Impacted Items:

- Integrations (new SFTP location, IP, and URL)
- Postgres Changes (Lookups, Query Portlets, GEL in Workflows, Reports)
- Data Extractions
- URLs Embedded in XOG GEL, ODATA, & Jaspersoft

• Identify Users Who Require Additional Training for the Upgrade

- Develop Test List, Test Scripts, and User Stories for All Impacted Items
- Start the Work for Client-Side Integration Changes
- Create a Training Plan, Including Materials and End User Sessions Needed to Support New Upgrade Features

Reduce Technical Debt

Remove Unused or Overly Complex Items

Most instances of Clarity have many objects, fields, portlets, and workflows that are no longer utilized. Complex integrations and configurations can also significantly increase migration risk and cost.

- Review complex configurations—especially integrations—to find ways to simplify.
- Review all custom configurations, and remove unused items.
- In our experience, the legacy “adapter” integrations built by CA Global Delivery are overly complex, error prone, and expensive to maintain annually. Rego offers a one-time replacement of any legacy connector with a higher quality, simplified connector for 3K (one-time, no recurring costs, and upgrade proof).

Security Review

Google Cloud Hosting

The IT Security Dept. often needs to lead a security review of the SaaS provider. We recommend working with your internal security team to engage Broadcom related to the move to Google.

Google Cloud Migration Services

Oversight & Best Practices

Broadcom will provide a high touch service, but clients will need their own project manager as a single point of contact. As issues or questions arise, Rego can provide an expert voice and can advocate on your behalf with Broadcom based on our experience.

Testing

Your largest effort for this migration will be expended in testing every item undergoing remediation, especially remediated queries and integrations. Data, performance, and access should also be reviewed and tested. Rego’s experts can reduce the duration and risk of test execution.

Remediation Services

Broadcom will be using a set of tools to remediate any SQL statements within lookups, queries, and workflow GEL scripts. This remediation approach is good, but not error-proof. We expect some instances where remediation will be required. Rego can be involved to address remediation errors as they occur.

Broadcom cannot automate the remediation for Jaspersoft reports. Report SQL statements will be manually updated (likely using low-cost junior resources from an offshore partner). Rego can assist in addressing errors, or we can proactively perform the report remediation with our expert resources.

Migrate with Confidence

Contact Rego to set up a planning call and talk about next steps.
